

Plan# MBI025-13965

House Plan Details

A brick exterior with pedimented gables provides a traditional welcome. An extremely compact plan allows this home to work on many narrow lots. The garage is set forward so it works well on property that slopes front to back. The exterior is elegantly proportioned. Inside the master suite, with its own study, is very large and allows great flexibility of use. This house is only 52 feet wide, yet it contains a fabulous master bedroom suite with lots of space. The guest room at the rear of the home with its own bath offers great privacy. This is a relatively easy house to construct. Bay windows in the living and breakfast rooms let in added light and create aesthetic interest without huge expense.
